

Our Mission

Our mission is to provide students with professional development, Information Technology fundamentals, and life skills, which will help them to achieve their personal and career goals.

The Problem

STEM education is critical to driving innovation in our economy and society. The U.S. Bureau of Labor Statistics predicts that there will be over 1 million computing job openings by 2022. Despite growing demand from employers and students, it remains marginalized throughout our K-12 education system.

The Solution

Through a unique combination of classroom instruction, teacher training sessions, and interactive life skills seminars, our programs have reached more than 2,000 youths, and touched more than 900 community members since inception.

Please help us to introduce more K-12 students and teachers to opportunities in STEAM fields such as Computer Science, Arts and Engineering, to prepare them for the demands of tomorrow's workforce, and to transform our communities.

Labtech Diagnostics is a proud sponsor of Community Code organization.
