

## Acetyl Fentanyl, Qualitative, Blood

Test ID: 91830

CPT: 80354 (HCPCS: G0480)

### Clinical Significance

Acetyl Fentanyl, Qualitative, Blood - Acetyl fentanyl is a fentanyl analog previously undocumented in illicit drug use that is up to five times more potent than heroin. Acetyl fentanyl's enhanced potency has led to a number of reported deaths due to overdose. The Centers for Disease Control (CDC) recommends laboratories to provide analytical options for acetyl fentanyl in order to provide enhanced surveillance for healthcare providers.

### Test Details

#### Components:

**Methodology:** Chromatography/Mass Spectrometry

### Reference Range

Negative<sup>TM</sup>

### Container

Sodium fluoride (gray-top) tube

### Transport Temperature

Room temperature

### Specimen(s)

Whole blood

#### Minimum Volume:

1 mL

### Specimen Stability

Room temperature: 5 days

Refrigerated: 7 days

Frozen: 30 days

### Reject Criteria

### Days Performed

Mon-Fri

### Collection Instructions

Alternative Specimen(s)

Whole blood collected in: Sodium heparin (green-top) tube or EDTA (lavender-top) tube
